Plotraa handover: pending errors fixed

For: Sant (review, merge, deploy) | From: Pankaj's session with Claude | Date: 19 Oct 2026

Branch: claude/pending-errors-fixes (plotra-backend, based on main). Independent of the street-view and sign-blur PRs.

Fixes for the list of errors found in production testing. Code only: **no migration and no new environment variables**. Tests: 125/125 pass (`npm test`, 6 new tests in test/pendingErrors.test.js).

1. What was fixed

Priority	Problem	Fix	Files
High	A selling message during an open dealer signup got the "dealer will contact you" reply but saved no seller lead (2:48 PM case).	A selling message always creates or updates the seller lead (an owner adding details later fills the blanks of the open lead), and it cancels the pending dealer signup so the team does not review it. Also works when the assistant is off or fails: the lead is saved and a fixed reply is sent. The assistant's own "seller_lead" choice is honoured too, not only keyword matches.	assistantService.js, agentSignupService.js (cancelPendingSignup), sellerIntent.js
High	Monthly "is it still for sale?" check reached an old number after a user's phone was renamed.	**Not reproduced in code:** the check already reads the current users.phone of the listing's assigned_agent_id, else created_by. Added a log line of the user id and number for every check, an injectable sender, and a regression test with a renamed number. Most likely cause: the listing still points at an old users row (see section 2).	listingStatusCheckService.js
Medium	An English question ("what are your plans?") got a Hinglish reply because the chat was Hinglish earlier.	The language of the current message decides. Earlier turns only break a tie when the message is too short to tell ("ok", "Dugri"). The prompt says the same.	replyLanguage.js (detectMessageLanguage), assistantService.js, plotraaKnowledge.js
Medium	Near-silent clips became "One sec." and were handled as real messages.	Clip length is read from the Ogg header. Clips under 0.6 s are skipped without calling OpenAI. A 1-2 word transcript from a clip under 3 s is "unclear" (dealer gets "voice note samajh nahi aaya"). Filler such as "One sec", "um", "hmm", "okay then" is dropped at any length. Real short answers are kept: haan, yes, no, ok, hello, ji, done, sold, "pin nahi" (a voice "haan" approves a preview).	voiceNoteService.js
Medium	Server backups and scratch files could be committed or conflict on pull.	.gitignore now excludes .env.bak, .env.save*, *.bak and *.bak-*.	.gitignore

2. Still needs action on the server

- **knexfile.js (modified) and src/workers/geo.js (untracked):** these exist only on the server, so they could not be reviewed here. The repo's knexfile.js is the standard one and the repo has no src/workers/geo.js (npm run worker:geo runs geoEnrichmentWorker.js). On the server run `git diff knexfile.js` and `cat src/workers/geo.js`, decide what is needed, commit it, and until then `git stash` before any pull so nothing is overwritten.
- **Renamed number:** run `SELECT l.id, l.created_by, l.assigned_agent_id, u.phone FROM listings l JOIN users u ON u.id = COALESCE(l.assigned_agent_id,`

`l.created_by) WHERE l.status='active';` If SK's listings point at an old users row, update created_by / assigned_agent_id. After deploy, the pm2 log shows `[StatusCheck] listing ... -> user ... (phone)` for every check.

- **Signboard photo (live listing 17e72cb...):** no longer applies to the blurred still, which was replaced by the locked street view. Blurring signs is handled by the separate sign-blur PR.

3. Deploy

- Merge the PR, then on EC2: `git pull && npm ci && pm2 restart all --update-env`. No migrate.
- Optional env vars (defaults in brackets): VOICE_SHORT_CLIP_SECONDS [3], VOICE_MIN_CLIP_SECONDS [0.6].

4. Test on a real phone after deploy

- Start joining ("main dealer hoon"), then send "meri Dugri wali kothi bechni hai 1.5 crore": reply is about the owner side, a row appears in Admin > Seller Leads, and the Agent Signups entry is gone from pending.
- Send a second message with more detail ("200 gaj"): the same lead is updated, not duplicated.
- Ask "what are your plans?" in the middle of a Hinglish chat: English answer. Ask "plans kya hain": Hinglish.
- Send a 1 second near-silent voice note: "voice note samajh nahi aaya". Send a voice "haan" to approve a preview: it still works.
- Check the pm2 log for the [StatusCheck] line after the next 10:00 daily run.
