Chat QA round 2

Handover: WhatsApp chat QA round 2 (21 Oct 2026)

Branch `claude/inspiring-archimedes-bcqr2o`, backend only. No migration. 142 tests pass. Not tried against the live model, real WhatsApp or real OpenAI.

1. Items and what was done

#	Item	Status	Change
1	Visitor flow: dealer or owner?	Fixed, **retest**	The assistant asks “Aap dealer hain ya property owner?” when unclear. Dealers also get `/request-access`, owners `/sell-property`, once per chat (`visitorFormLine` in `assistantService.js`; rules in `plotraaKnowledge.js`).
2	Duplicate draft when an address arrives with an open draft	Fixed (likely cause)	`src/utils/addressMatch.js`: the same address reordered or with extra parts is the same property. Different house/sector numbers or a different locality is a new property. The `draft=` log line was never seen, so the cause is inferred.
3	Support raised twice, “Transaction query already complete”, no confirmation	Fixed (inferred cause)	`serviceContext.js` rolled back the webhook transaction as soon as the sender hung up, so a slow reply failed mid-handler and the sender’s retry ran the message again. Now it waits up to 45 s (`SERVICE_TRX_ABORT_GRACE_MS`) and commits. The reply is sent before chat history is saved, and the failure path no longer raises a second ticket.
5	Buyer search ignores size (“200 gaj”)	Fixed	`buyerSearchService.js`: `parsePlotSize` converts gaj, sq yd, sq ft, marla, kanal to sq yards; +-10%. Unreadable listing sizes come after the matches. BHK is ignored.
6	A plain question creates a support ticket	Fixed	A plain question never raises a ticket, even if the model picks “support” (`isPlainQuestion`). The model-off fallback no longer treats “support number?” as a request.
8	Support number and upgrade steps missing	Fixed	Support number added (`PLOTRAA_SUPPORT_NUMBER`, default the Plotraa WhatsApp number). There is no self-serve upgrade: plan changes go to the team as a support request. The assistant never describes upgrade steps.
9	Discount reply too long	Fixed	Prompt rule (2 lines) plus `capShortReply` trims any discount reply over 280 characters at a sentence end.
11	Gurmukhi name and area gets only “swagat hai”	Fixed (likely cause), **retest**	A first message with only a name and area now starts a dealer signup. The follow-up lines are in Gurmukhi for Gurmukhi writers.
12	`knexfile.js` and `geo.js` not committed	Nothing to do	`knexfile.js` is already tracked and no `geo.js` exists in this repo. Check the other machine or repo.

Items 4, 7 and 10 were not in the list and were not touched.

2. Product rules the assistant now states

- New agents get a free trial of 5 days and receive the payment QR for their plan.
- Payment is due by day 7. If unpaid, the service stops until it is paid.
- Pay by QR, or cash with a receipt photo; the team approves it.

3. Open issues

- **The 5-day trial and day-7 stop are not implemented in code.** `paymentReminderWorker.js` still works on a monthly cycle with reminders from day 28. The assistant now says the 5/7-day rule but nothing enforces it.
- The `serviceContext.js` change also affects admin routes: an aborted admin request now commits after the grace period instead of rolling back at once.
- Retest with the real model: items 1, 3, 11, plus Gurmukhi wording.

4. Files

`src/assistant/plotraaKnowledge.js`, `src/services/assistantService.js`, `src/services/agentSignupService.js`, `src/services/buyerSearchService.js`, `src/controllers/agentIntakeController.js`, `src/middleware/serviceContext.js`, new `src/utils/addressMatch.js`. Tests: `test/assistantService.test.js`, new `test/plotSizeAndAddress.test.js`.
